

**Sulphur Creek Wasteway Turbidity Measurements  
Irrigation Seasons 1997-2005**

The Sulphur Creek Wasteway turbidity measurements during the irrigation years of 1997 to 2005 are illustrated by a graph with limits from 0 to 100 NTU units. While the early years of 1997 to 1999 showed turbidity measuring above 25 but below 100 NTU, most measurements from the 2000 irrigation season forward are below the 25 NTU goal.
